"Strength that you can trust."

Magnador is a trusted and long-standing brand in the burglar-proofing industry, uncompromising in our quality since 1989.

We are the only company to make use of a patented stainless steel slamlock in our gates, providing extra durability and security.

Our products are designed and manufactured to your specifications to ensure that you get the best burglar-proofing solutions for your home.

**No room for
aluminium when
steel is 3x denser!**

All our swing gates are hot dipped galvanised and exterior textured epoxy coated. Various designs can be chosen from our standard range. We manufacture custom gates to your specifications and designs if desired. Matching panels can be made to compliment your swing gate when an enclosure is needed to fully secure the area.

The lock tongue is protected by a wrap welded cover plate which covers over the front, top & bottom of the lock box. This limits access to the lock tongue.

The lock mechanism is housed in a broad 25mmx76mm cross bar, strengthening the overall structure of the frame. This can be set in the centre of the height or at a custom height.

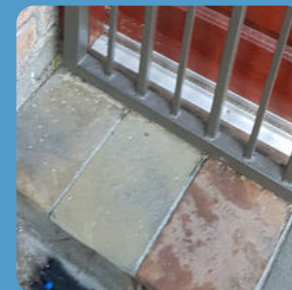

Features that count

Strong Bullet hinges are used for a secure fitting. These are mounted to the surrounding reveals with snap off security bolts. Larger 180mmx30mm flat bar hinge plates are used for more secure fixture.

A stopper plate (40x10mm) is welded on the opposite side of the lock. This makes it very difficult to force the gate frame away from the lock box to disengage the lock tongue.

Thicker 32mmx32mm frames (not 25mmx25mm) are used for extra strength. The corners have a mitred running weld seam which is much neater and adds strength to the gate.
